ArisGlobal

agWorld™

KEY BENEFITS

- Provides centralized access to all eClinical solutions with single sign-on (SSO) including 3rd third-party vendor systems and internally developed systems

- Provides cross-domain and cross-product metrics and reports

- Supports easy integration via Web services

- Streamlines operations and reduces costs

- Enhances data quality and increases collaboration and efficiency

- Reduces IT infrastructure and support costs

Given the complexity of today's clinical trials environment, life science companies seek solutions that enhance decision making through greater efficiency and knowledge sharing. Achieving this level of community requires a level of integration that spans across critical departments and systems. Portals provide users a convenient way to communicate and access multiple solutions centrally and securely.

agWorld™

agWorld is the fully enabled eClinical portal that revolutionizes the way sponsors conduct their clinical research programs. In the face of increasing trial complexity-often spanning the globe and involving many different systems, people and processes-sponsors now have a solution that simplifies the way study teams interact with their supporting clinical systems. Out-of-the-box, single sign-on access is provided to the ArisGlobal LifeSphere Clinical platform suite, which includes integrated solutions for EDC, CTMS, trial disclosure, ePRO, IWRs, supply management and medical coding.

Each LifeSphere Clinical solution strives to be a best-in-class solution that can be deployed independently. When deployed together, LifeSphere Clinical offers a comprehensive, unified platform for clinical research that is compliant with legal and ethical responsibilities of both sponsors and marketing authorization holders. Sponsors benefit from providing their users with a central, personalized workspace to access key study information and documentation.

Secure Single Sign-On Access

agWorld is the gateway to a unified eClinical platform that mitigates the requirement to deal with multiple vendors and provides users with the complete view of their trials. Leveraging single sign-on (SS0) technology based on SAML, users have to remember only one username and password to access all LifeSphere Clinical solutions. All clinical programs are accessed through one browser window, providing a convenient and easily accessible way to navigate, find, retrieve and combine data from the different systems.

ABOUT ARISGLOBAL®

ArisGlobal is a visionary technology company that's transforming the way today's most successful life sciences companies develop breakthroughs and bring new products to market. The ArisGlobal LifeSphere™ cognitive technology platform integrates machine-learning capabilities to automate the core functions of the product lifecycle. Designed with deep expertise and a long-term perspective that spans more than 30 years, our cognitive platform delivers actionable insights, boosts efficiency, ensures compliance, and lowers total cost of ownership through multi-tenancy.

Headquartered in the United States, ArisGlobal has regional offices in Europe, India and Japan. For more information, visit arisglobal.com or follow ArisGlobal on LinkedIn and Twitter.

Performance Dashboards and Metrics

agWorld allows access to a variety of different systems to deliver information in a single, integrated personalized dashboard. The dashboards are role-based and can be personalized easily by the end user. Supporting dynamic tabular and graphical views with drill-down capabilities, users can view up to date clinical data from any source system such as EDC, CTMS, Safety or Regulatory. By allowing role-based access, users can deliver the information required to continually monitor the progress of their global clinical trial activity. Sponsors can also integrate third-party applications such as Google Maps.

Online Collaboration and Reporting

agWorld supports online collaboration tools such as online chat to facilitate communication and collaboration between all agWorld users. The online collaboration is extended to investigators via LifeSphere Investigator (Investigator Portal), allowing CRAs and site personnel to conduct communication instantly if logged on. It is also equipped with a central, integrated report writer that enables users to develop reports across the entire LifeSphere Clinical product portfolio, allowing them to collect information from a range of different clinical products.

Hosted Offering

ArisGlobal® understands that not all companies have the time, resources, budget or staff expertise to handle the effort involved in implementing, managing and supporting all the software solutions they require. While agWorld and all LifeSphere Clinical solutions can be deployed on premise, when delivered as a hosted SaaS solution through our agOnDemand platform, sponsors eliminate the investment in new hardware, software and application, as well as infrastructure support staff.

Organizations benefit from quick deployment and return on investment.
