

LifeSphere Investigator™

KEY BENEFITS

- Reduces the time and cost of site and investigator management
- Enables faster and more efficient site selection and initiation and hence an earlier start of patient recruitment
- Fosters greater collaboration between investigators and sponsors
- Boosts site staff productivity
- Gives investigators confidence and assurance they are in receipt of timely, important information
- Exchanges documents between sponsor and investigators electronically and manages the sponsor and investigator trial master file (TMF)
- Automates the secure distribution of SUSARS at significantly reduced cost
- Streamlines the training and management of site staff
- Allows investigators to express their interest in participating in specific clinical trials
- Enables sponsors to recruit and assess new study sites via feasibility questionnaires

The emergence of investigator site portals now provides sponsors with a platform that fosters collaboration and improved site management, all of which enables organizations to ensure global compliance and reduce costs.

LifeSphere Investigator™

LifeSphere Investigator is a clinical research investigator site portal that facilitates and streamlines the communication and collaboration between sponsors and their investigator sites. In addition to site staff, LifeSphere Investigator can be accessed by any third party personnel, including CROs, IRBs and ethics committees. As part of the LifeSphere Clinical platform, LifeSphere Investigator provides sponsors with a role based dashboard for securely accessing and viewing TMF-related documents and clinical trial information; reviewing and completing feasibility questionnaires; and maintaining site staff training records. LifeSphere Investigator also provides complete functionality of agSIR, the proven solution for automating safety report distribution to investigators, IRBs/ECs and other stakeholders.

Investigator Dashboard

Investigators need to find the information they need for their daily work fast. Designed for high user acceptance and satisfaction, LifeSphere Investigator is the portal that provides a single entrance to all the clinical applications an investigator will need, including EDC and operational data. Leveraging single sign-on (SSO) technology, investigators have to remember only one username and password. From its intuitive, role-based dashboard, LifeSphere Investigator gives investigators an immediate, condensed overview of what needs their attention, including SUSARS, trainings and feasibility questionnaires to complete, and new documents to read.

Secure Document Exchange

LifeSphere Investigator provides full document exchange and eTMF capabilities. Based on templates sponsors can easily define the eTMF structure for a study. Individual documents can be sent to investigators and will populate the electronic investigator file. In parallel, investigators are informed via e-mail that new information is available for them in the portal.

ABOUT ARISGLOBAL®

ArisGlobal is a visionary technology company that's transforming the way today's most successful life sciences companies develop breakthroughs and bring new products to market. The ArisGlobal LifeSphere™ cognitive technology platform integrates machine-learning capabilities to automate the core functions of the product lifecycle. Designed with deep expertise and a long-term perspective that spans more than 30 years, our cognitive platform delivers actionable insights, boosts efficiency, ensures compliance, and lowers total cost of ownership through multi-tenancy.

Headquartered in the United States, ArisGlobal has regional offices in Europe, India and Japan. For more information, visit arisglobal.com or follow ArisGlobal on LinkedIn and Twitter.

Once logged in, investigators have an easy-to-use, intuitive interface that gives secure access to necessary study documents. LifeSphere Investigator ensures investigators only receive the information they need. Investigators can send new documents to the sponsor via e-mail or upload them directly into LifeSphere Investigator and update documents.

Proven Safety Report Distribution

LifeSphere Investigator automates the electronic distribution of safety reports (e.g., SUSARS) to investigators, IRBs/IECs and any other stakeholders. Sponsors can easily review recipient lists generated by the system and generate cover letters. Report distribution can be limited to a single study or performed across studies at the product/substance level. Detailed transaction history reports can be easily generated for audit purposes or to generate the documentation for the TMF.

Site Feasibility Questionnaires

Feasibility questionnaires are an important component used to recruit, retain and determine the availability of investigators against protocol requirements. LifeSphere Investigator provides a library of templates from which sponsor users can develop, distribute and manage electronic feasibility questionnaires for collecting necessary investigator data. Investigators are invited to log in to the portal and enter their responses in an intuitive, easy-to-understand manner. Based on responses, LifeSphere Investigator calculates an overall score and generates reports based on that score for further analysis by the sponsor.

Investigator Self-Registration

LifeSphere Investigator provides investigator self-registration, which helps sponsors maintain an active pool of investigators for ongoing and future studies. Upon visiting a sponsor's web site and reviewing available study information, interested physicians can complete a self-registration form providing relevant contact and background information, as well as which studies are of interest. Sponsors can then take this information and make a decision on each registrant's participation in a given study.

Training

Sponsors must demonstrate that the appropriate level of general and study-specific training is being given to site staff. With a complete training management module, LifeSphere Investigator helps sponsors to manage the different trainings and training materials and to define the training needs of each of the study personnel. Site monitors maintain full site personnel records and tracks the progress of training provided.

Online Chat

Improving real-time communication helps improve the productivity for both sponsors and investigators. LifeSphere Investigator provides online chat functionality that fosters greater collaboration. These conversations can be converted to PDF and added to the TMF.

Hosted Offering

LifeSphere Investigator is delivered as either an on-premise or as a hosted SaaS solution through ArisGlobal's agOnDemand platform, eliminating the investment in new hardware, software and application, as well as infrastructure support staff. Organizations benefit from quick deployment and return on investment.
