

ArisGlobal LifeSphere™

Enabling your journey to digital healthcare
with advanced technology

Life sciences organizations face a diverse set of challenges that require a globally integrated, standardized solution that drives compliance, high quality and low cost. Yesterday's software solutions simply cannot deliver on their need to be both competitive and compliant.

ArisGlobal is the visionary technology leader that's transforming the way today's most successful life sciences companies develop breakthroughs, and bring new products to market. The ArisGlobal LifeSphere™ cognitive platform is helping today's life sciences organization face their digital journey with complete confidence.

For the first time, and with global regulatory compliance at its core, LifeSphere enables an enterprise-level approach that unifies every facet of the product lifecycle, ensuring that the digital journey is cohesive, streamlined, agile and responsive across systems, regions, and geographies.

LifeSphere™ Cognitive Platform

LifeSphere Clinical™

- Clinical trial management
- Trial disclosure
- Investigator Portal
- Safety-to-investigator reporting
- Electronica data capture
- Patient reported outcomes
- Clinical supply chain

LifeSphere Regulatory™

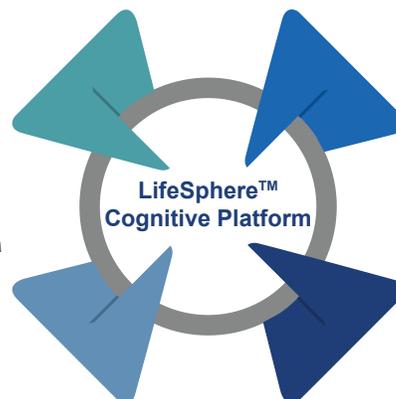

- Submission planning
- Approval tracking
- Agency communications
- Product change impacts
- Regulatory product submissions
- Medicinal product dictionary

LifeSphere Safety™

- Case receipt & triage
- Case management
- Safety submissions
- Submission tracking
- Signal detection & management
- Veterinary safety
- Central event coding

LifeSphere Medical Affairs™

- Medical information
- Product complaints
- Adverse event triage
- Call center
- Content management
- HCP & patient portal

"Pharma needs to go digital for business reasons, not IT reasons. CIOs and IT leaders should work with the visionary strategic functional-oriented and process-oriented stakeholders to identify the opportunities that are just beyond grasp. They should be proactive about canvassing digital opportunities and promising technologies."

Gartner Group,
"The Future of Pharma Is Digital,"
October 31, 2016

How LifeSphere Is Different

Cognitive Computing and Automation: LifeSphere Nava

For solution vendors like ArisGlobal, it's no longer about taking a task and putting it in the software; it's about taking the task and automating it in the software so that a person can focus on higher-order tasks, perform more analytics, and have better comprehension of the data.

LifeSphere Nava, a cognitive computing foundation layer takes advantage of advanced machine-learning capabilities to automate core processes to reduce processing time. Utilizing a process and workflow-driven approach for automation, LifeSphere enables better decision making, and helps users to work smarter and faster with reliable data at their fingertips.

Integration and Open Architecture

Based on a powerful integrated and open architecture, LifeSphere is the only comprehensive cognitive platform that spans across all domains – clinical, safety and pharmacovigilance, regulatory affairs and medical communications. The benefit: no digital 'solution silos' that can't connect or communicate with others.

Industry Standard Practices

Each of the solutions available across the LifeSphere platform have been configured, developed and maintained through industry collaboration and a focus on best practices for both operations and processes. Companies benefit from a standard, off-the-shelf configuration that significantly reduces the cost and timeline of configuration, deployment and validation.

Multi-Tenancy

Offered as the standard deployment of ArisGlobal's solutions, multi-tenant Software-as-a-Service (SaaS) capabilities provide a compliant, secure, pre-validated platform that insulates against changing regulations, upgrade and maintenance costs.

ABOUT ARISGLOBAL®

ArisGlobal is a visionary technology company that's transforming the way today's most successful life sciences companies develop breakthroughs and bring new products to market. The ArisGlobal LifeSphere™ cognitive technology platform integrates machine-learning capabilities to automate the core functions of the product lifecycle. Designed with deep expertise and a long-term perspective that spans more than 30 years, our cognitive platform delivers actionable insights, boosts efficiency, ensures compliance, and lowers total cost of ownership through multi-tenancy.

Headquartered in the United States, ArisGlobal has regional offices in Europe, India and Japan. For more information, visit arisglobal.com or follow ArisGlobal on LinkedIn and Twitter.
