

Transforming the way today's most successful life sciences companies meet their toughest challenges

- Cognitive computing foundation layer that takes advantage of advanced machine-learning capabilities to automate core processes to reduce processing time.
- Powerful integrated and open architecture that spans across all domains – clinical, safety and pharmacovigilance, regulatory affairs and medical affairs
- Industry standard practices reflected in solutions that are developed and maintained through industry collaboration
- Multi-tenancy cloud deployment ensures solutions are compliant, secure, and pre-validated to insulate against changing regulations, upgrades and maintenance costs

Imagine a world where your innovations, collaborations and global business objectives are brought seamlessly to fruition; where your technology is a true enabler and not constantly at the mercy of updates, complex company specifics or lack of integration; and where those straightforward, yet time-consuming tasks could be automated.

ArisGlobal is the visionary technology leader that's transforming the way today's most successful life sciences companies develop breakthroughs, and bring new products to market. The ArisGlobal LifeSphere® cognitive platform, based on four key tenets, is helping these organization face their digital journey with complete confidence.

Our unmatched experience and deep domain expertise in solving the real-world research and development needs of companies and organizations makes ArisGlobal an established market leader in major regions of the world.

- 200+ customers across pharmaceutical, biotech and medical device manufacturers, CROs and regulatory agencies
