

LifeSphere® IDMP

Combining Compliance and Strategic Business Benefits in One Solution

Delays in completion of guidelines for Identification of Medicinal Products (IDMP) have left companies unsure how to proceed with their own IDMP action. With xEVMPD still mandatory, life sciences companies must ensure they submit their data in compliance with EMA's requirements while leveraging their investment to collect data in an IDMP-compliant fashion and achieve operational efficiency goals.

LifeSphere IDMP is a complete technology solution that seamlessly works in any technology environment at any level of a life sciences company's maturity in the data standards compliance journey, allowing companies to become compliant with standards like xEVMPD, and IDMP across the globe, while realizing multiple strategic business benefits.

A Unified Data Standards Compliance Software Solution

Life sciences companies often struggle with analysis-paralysis when it comes to selecting the right tools to address the future regulatory landscape. Most companies are looking to take the necessary steps that help them prepare support IDMP assessment and initial data collection while continuing to be xEVMPD compliant without locking into an inflexible approach.

As a multi-tenant cloud-based solution, LifeSphere IDMP gives clients flexibility in meeting compliance and business objectives while improving cross-department process efficiency.

Improve Data Quality and Management

LifeSphere IDMP improves data quality with support for terminology mapping with internal systems and external agency systems like EMA SPOR. The solution assesses data quality and completeness during initial xEVMPD/IDMP readiness assessment and data collection pilots.

LifeSphere IDMP offers a structured technology-enabled approach for complete xEVMPD to IDMP coverage and beyond, keeping companies insulated from changing regulations and timelines while minimizing technology expenditure and risks.

Delivering end-to-end Capabilities to Boost Productivity

The solution collects structured data from source systems via interfaces using LifeSphere IDMP's integration capabilities, and it extracts unstructured data from documents using LifeSphere IDMP's NLP/OCR capabilities.

It also manages and tracks the data collection, review and validation process through configurable workflows. And it validates the collected data against agency-specific business rules by checking readiness for submission.

Reduces Manual Intervention

Integration with internal systems, unstructured documents and external systems helps to streamline processes. And it shares IDMP compliant medicinal product information and IDs with other departments via reports or via system interfaces built into LifeSphere IDMP's integration capabilities.

LifeSphere IDMP also generates and electronically submits standard specific XML files to agencies and automatically processes acknowledgements, errors and assigned identifiers.

Grows as You Grow

The solution comes out of the box with not just xEVMPD and EU IDMP Iteration 1 fields, but all ISO IDMP fields plus additional regional extensions. As a cloud-based solution, it can be configured to add any regional fields or business rules with minimal validation time.

Its flexible design also enables it to connect to a Master Data Hub for sourcing standard specific information into its xEVMPD and IDMP compliant Data Hub. LifeSphere IDMP also generates return on investment by generating a high-quality, IDMP-compliant central product dictionary.

ABOUT ARISGLOBAL®

ArisGlobal is a visionary technology company that's transforming the way today's most successful life sciences companies develop breakthroughs and bring new products to market. The ArisGlobal LifeSphere® cognitive technology platform integrates machine-learning capabilities to automate the core functions of the product lifecycle. Designed with deep expertise and a long-term perspective that spans more than 30 years, our cognitive platform delivers actionable insights, boosts efficiency, ensures compliance, and lowers total cost of ownership through multi-tenancy.

Headquartered in the United States, ArisGlobal has regional offices in Europe, India and Japan. For more information, visit arisglobal.com or follow ArisGlobal on LinkedIn and Twitter.
