

LifeSphere® EasyDocs

Streamlining Enterprise Document Management and Workflow Process Continuity Across the Product Development Lifecycle

For many life sciences companies involved with clinical trials and regulatory submission tracking, the ability to maintain and manage all regulated content and workflow across multiple systems is a significant and costly challenge. Disparate, stand-alone clinical operations (CTMS) and regulatory affairs (RIMS and Publishing) systems create unnecessary duplication of documents and master data, making the 'single source of truth' nearly impossibility to provide.

LifeSphere EasyDocs is a highly configurable, advanced cloud platform architected to streamline and unify enterprise document management and provide continuity of cross-functional workflows across the full drug development process. The platform is powered by Nava®, ArisGlobal's proprietary cognitive computing engine, to drive significant efficiency gains for clients.

Unifying Clinical Operations and Regulatory Affairs

Managing multiple systems and a complex integration environment creates obstacles for effectively managing regulated content and workflows.

LifeSphere EasyDocs overcomes that complexity by providing a single platform that is unified with ArisGlobal's LifeSphere Regulatory and LifeSphere Clinical suite of products. Both clinical and regulatory documents can be used across different domains without having to store multiple copies. Additionally, each department will have access to the latest documents and versions, allowing for more accurate and streamlined processes.

Simplifying and Streamlining the User Experience

LifeSphere EasyDocs is platform and browser-agnostic and a modern, mobile-enabled user interface ensures the continuity of business processes. Users benefit from standard, out-of-the-box document management capabilities for various document types with configurable business workflow processes spanning regulatory document authoring (collaborative and structured), dossier management (eCTD), electronic master file (eTMF), site initiation packages, and more.

Throughout the authoring process, users gain control over document management capabilities, including authoring, versioning, and e-signatures. The ability to configure cross-functional workflows and manage all documents within a single repository significantly increases user productivity and efficiency, while automated steps within the workflow process reduce cycle times.

Delivering Insights for Faster Decision Making

Knowing the real-time state and readiness of all regulated content – what exists and where it is being used – depends on being able to track and be aware of all potential bottlenecks and issues. LifeSphere EasyDocs empowers managers with configurable dashboards and reporting capabilities that help in making informed decisions and providing greater business insight.

Providing Full Interoperability Every Step of the Way

LifeSphere EasyDocs is built on the SOA architectural principles and offers a highly interoperable API library to give companies full flexibility to integrate with third-party systems of their choice.

Easy Implementation, Higher Security & Availability

Offered as the standard deployment of ArisGlobal's solutions, multi-tenant Software-as-a-Service (SaaS) capabilities provide a compliant, secure, pre-validated platform that insulates against changing regulations, upgrade and maintenance costs. LifeSphere EasyDocs is deployed on the Amazon Web Services (AWS) cloud, giving companies higher system availability, agility and unmatched security.

ABOUT ArisGlobal®

ArisGlobal is a visionary technology company that's transforming the way today's most successful Life Sciences companies develop breakthroughs and bring new products to market. Our end-to-end drug development technology platform, LifeSphere®, integrates our proprietary Nava® cognitive computing engine to automate all core functions of the drug development lifecycle. Designed with deep expertise and a long-term perspective that spans more than 30 years, LifeSphere® boosts efficiency, ensures compliance, delivers actionable insights, and lowers total cost of ownership through multi-tenant Software-as-a-Service (SaaS) architecture. Headquartered in the United States, ArisGlobal has regional offices in Europe, India, Japan and China. For more information, visit arisglobal.com or follow ArisGlobal on [LinkedIn](#) and [Twitter](#).
