

EV Triage

Delivering efficiency through intelligent, automated triage of E2B cases from EVWEB

Today's marketing authorization holders expend significant effort to meet the EMA's requirements for downloading and sorting relevant E2B (R3) files from the EVWEB portal. LifeSphere EV Triage is here to help.

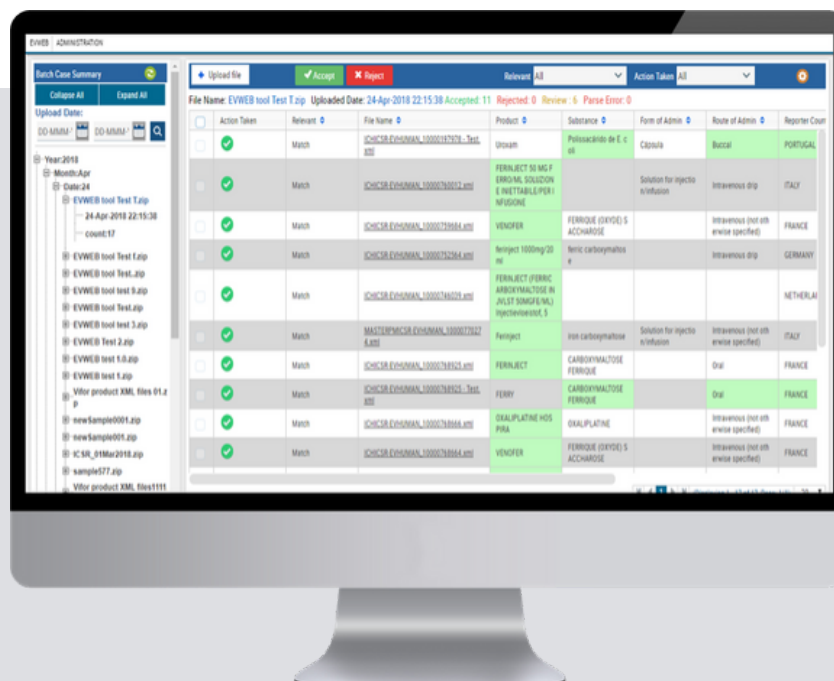

Reducing the Burden on PV Teams

LifeSphere EV Triage is a cloud application that automates triage of applicable EVWEB cases from non-relevant cases, bringing peace of mind and efficiency gains to busy safety teams. With LifeSphere EV Triage, safety teams no longer have to spend many hours manually reviewing and determining which EVWEB cases have relevance to company products.

Automate for Efficiency

For easy and thorough case reconciliation, LifeSphere EV Triage extracts case data as needed, and checks how many ICSRs were received, imported and rejected. The resulting efficiency gains reduce cost and enable PV teams to focus on more critical tasks.

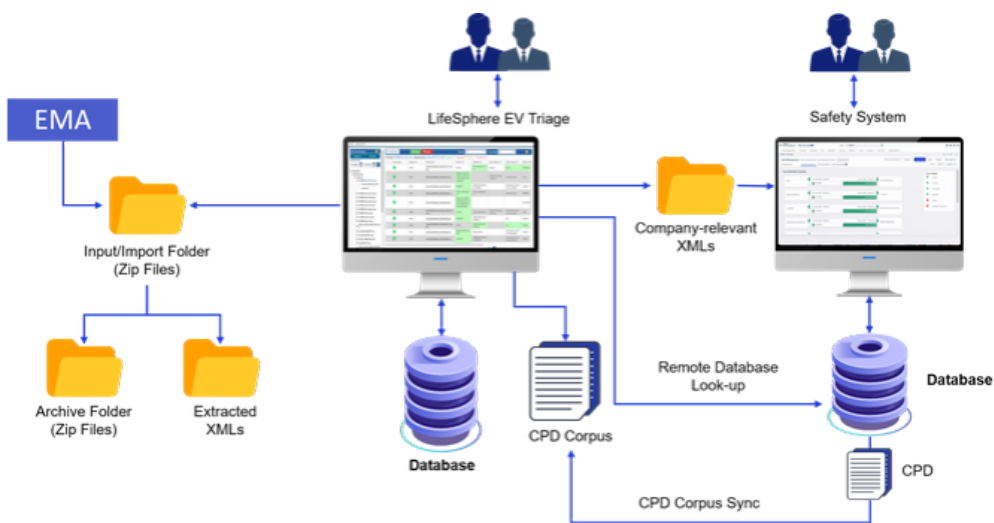

LifeSphere
EV Triage

Efficiency Through Intelligent Automation

After downloading an XML ZIP file from EVWEB, LifeSphere EV Triage runs an auto-match algorithm to quickly identify the applicable product-specific tags. Based on those tags, incoming reports are either tagged as Applicable ICSRs or as Potential ICSRs. All Applicable ICSRs are sent for further processing to either the company's PV system of choice or E2B converter tool. Potential ICSRs are automatically archived for future reference.

Key Features

- Simple, intuitive user interface provides date-wise segregation of Zip files, a summary of each download, matching attributes in a single listing, easy visualization and data exchange, and easy filters for actions taken and relevance
- Maintains a local corpus of company products and attributes (trade name, substance, administration, authorization country, etc.) for rapid case triage
- For any product combination not found in the local corpus, includes a configuration to look into the safety database CPD
- Streamlines reconciliation by extracting data and checking how many ICSRs were received, imported and rejected. A reconciliation report is generated based on data range.
- Out-of-the-box integration and syncing with LifeSphere MultiVigilance and 3rd party safety systems

About ArisGlobal

ArisGlobal is the visionary technology company that's transforming the way today's most successful Life Sciences companies develop breakthroughs and bring new products to market. Our end-to-end life sciences platform, LifeSphere®, integrates our proprietary Nava® cognitive computing engine to automate all core drug development functions. Designed with a longterm perspective that spans more than 30 years, LifeSphere® boosts efficiency, ensures compliance, delivers actionable insights, and lowers total cost of ownership through multi-tenant architecture.

Headquartered in the United States, ArisGlobal has regional offices in Europe, India, Japan and China
